

Facts about Javani™

What is Javani™ intended for?

- Javani™ skin rejuvenation products are topical cosmetics intended for hydrating the epidermis and thereby diminishing the signs of aging such as poor skin tone, rough texture, redness, and fine lines or wrinkles.

What is it made of?

- Both Javani™ products contain micronized bovine-sourced collagen. The collagen is in its natural, triple-helix form, which is optimum for maximum acceptance into the skin.
- Javani™ Cream incorporates collagen fibers infused with vitamins, essential oils, and some preservatives.
- Javani™ Gel is a pure collagen formulation with vitamins.
- All Javani™ products are alcohol-free, non-comedogenic, and will leave no residues.

What is Javani™ Deep Hydrating Gel for?

- Javani™ Gel delivers large amounts of collagen fibers to the skin which deeply hydrate. The increased moisture softens and slightly swells the epidermis, reducing the appearance of fine lines and wrinkles. Javani™ Gel is a radical product intended for professional use only.

What is Javani™ Deep Moisturizing Cream for?

- Javani™ Cream is used to moisturize, soothe, and smooth the skin. It is intended for use after Javani™ Cream as a finishing step or after any number of processes to reduce redness, inflammation, and itchiness, and to improve skin texture. Javani™ Cream is intended for professional and home use.

How does it work?

- The micronized collagen fibers in Javani™ products adhere to and absorb into the outermost layer of skin (the epidermis) and hydrate. This serves two purposes: first it improves the health of the skin by raising moisture levels to the levels necessary for proper skin renewal and second, by plumping the epidermis, giving the appearance of added skin volume, and reducing the appearance of wrinkles and fine lines.

Is it safe?

- The bovine-sourced collagen used in Javani™ products comes from sources in the United States. The US is a BSE-free country, meaning that “mad cow disease” is not a concern for bovine products produced there. Bovine collagen has been proven to be the most compatible form of non-human collagen for the human body.
- A very small percentage of people who are allergic to bovine-source materials (beef, leather, etc) should not use Javani™ products.
- Javani™ products are intended for normal skin, but are intended for all skin types. Drier skin will use more product; oily skin will use less.

How do you use it?

- Javani™ products can be used alone in a two-step process. It is especially effective as a facial!

-
- The products can also enhance a variety of other skin care procedures, such as microdermabrasion, laser resurfacing, chemical peels, Ultrasonic infusion, light therapy, galvanic response, and many more. Many of these procedures work well, but remove moisture from the skin. Javani[™] restores that moisture and makes the results even more apparent.

How long do the results last?

- Results are immediate. When properly applied stand-alone and maintained with Javani[™] Cream, the results can last for weeks.
- Results can vary according to skin type and the kind of procedure performed. When used in combination therapy, the results last at least as long as the normal procedure, but can be extended by the regular application of Javani[™] Cream.

Unique benefits of Javani

- Javani minimizes the appearance of fine lines and wrinkles without the need for injectables or sub-dermal implants. It also reduces the signs of photaging, including poor skin tone, rough texture, and dryness.
- Javani can work in conjunction with injectables or sub-dermal implants to *erase* the appearance of fine lines and wrinkles.
- Javani can work in combination therapy with existing dermatological processes to treat a wide range of dermatological issues. With Javani you can preserve existing investments in training and equipment, while providing additional value for your customer.
- Javani is made of natural substances that are easy to recognize and that are compatible with the human body. No other collagen-based product contains as much natural, micronized, intact collagen as Javani products. No other products have stabilized intact collagen at room temperature.
- Results are immediate and long-lasting with simple maintenance.
